Built Better from the Inside Out

Door Construction

Our Courtyard Collection® doors are made with an insulated steel construction and fashioned to resemble the elegant wood designs of traditional carriage house doors.

Foamed-in-place Polyurethane

With a U-factor¹  of up to 0.15 and an R-Value² of up to 12.76, foam insulation helps control costly heat loss and gain. This type of insulation can also diminish street noise and provide for quieter door operation.

Nylon 13 Ball Bearing Rollers

Durable nylon rollers containing 13 heavy-duty ball bearings for quiet operation are standard on Model 7560 and an optional upgrade for Model 7520.

Thermal Seals

Innovative in-between section thermal seals provide an air infiltration rating as low as .08 cfm and help to provide superior resistance to the elements.

Wood Grain Textured Overlay Boards

Weather resistant trim overlay boards help protect against dents and the elements.

Wind Load-Rated Options

Choosing wind load-rated options helps safeguard your door in extreme wind conditions. Wind load rating means your home can be built to withstand a variety of wind conditions and meet your local building codes. (Optional on Model 7560)

High Cycle Spring

This optional spring provides a 25,000 cycle life for more than twice the life of a standard torsion spring.

Overhead Door™ Brand participates in the DASMA Thermal Performance Verification Program. The program verifies the thermal performance of sectional garage doors. The lower the U-factor rating, the better the thermal performance.

 Symbol indicates verified U-factor rating in accordance with the DASMA Thermal Performance Verification Program.

1 - U-factor is independently tested and verified per ANSI/DASMA 105 using solid doors and specific product sizes.

2 - Overhead Door Corporation uses a calculated door section R-value for our insulated doors.
